ATS8656

Licence de mise à niveau du logiciel Advisor Management pour augmenter le nombre de centrales Everon connectées - un pilote par centrale ATSx700 supplémentaire.

One single interface controlling multiple complex systems

Security and facility management has evolved into a complex set of business functions, which all need to be managed taking safety and security of the staff, visitors and physical assets as a priority. There are numerous factors driving complexity: multiple sites, remote locations, flexible working hours, number of employees and visitors, as well as evolving needs.
Therefore only an integrated management solution is able to cope with this evolution, providing facility and security managers with a clear view and control over these different functions.
Imagine one interface to manage and control on-site or remotely all of your security needs on various premises, ranging from intrusion and fire detection to access control and video surveillance.
Imagine these different systems to interact thanks to a seamless integration enabling verification of events through video streams and linking intrusion and fire events with access control to safeguard the safety and security of people.

The whole is more than the sum of its parts

Digital video surveillance:
Advisor management software supports a range of TruVision digital video recorders and network video recorders. Additional to the quality, ease of use and reliability of these video products, their integration into Advisor management software allows system operators to have direct access to live and recorded video, providing instant visual verification of events and alarms.
As a result, operators can focus on one interface to monitor their facilities rather than operating multiple separately running systems. This makes your security setup more efficient, responsive and reliable, saving valuable time and money.

Intrusion:
Advisor Management software is supporting Advisor Master, Advisor Advanced and Axon control panels. It provides alarm management combined with video to quickly and efficiently resolve any alarm. It also allows easy configuration of persons requiring access to restricted areas.
In case of intrusion detection, the alarm is pinpointed on the floorplan and a relevant live video stream can be started automatically while lights and doors can be controlled by pressing one button. The presence of intruders is easily verified by switching to recorded video streams and the log file will keep track of the route followed.

Access control supporting multiple sites:
Access Control based on Advisor Master, Advisor Advanced, Axon and CDC4 is providing complete access in multi-site environments where people need access to more than one site.
The Advisor management software is allowing a specific user to gain access where required and this via the same or distinct credential. All this is possible without having to add the user for each site or each

Détails

- Integrated Security Management Software pour l'intrusion, le contrôle d'accès, la vidéo et l'incendie
- Outil de gestion de la sécurité pour l'utilisateur final
- Plusieurs langues, sélectionnables par opérateur
- Une seule interface utilisateur pour tous les appareils
- Interface utilisateur intuitive
- Seulement 3 vues pour la gestion et le contrôle
- Gérer et contrôler les produits commerciaux Aritech
- Gérer et contrôler les alarmes à partir de n'importe quel appareil connecté
- Gérer et contrôler plusieurs sites
- Pas de limitation de licence client
- Gérer les personnes, y compris les droits d'accès et les informations d'identification, sans restrictions liées à l'appareil
- Suivi et traçabilité des badges distribués aux visiteurs
- Plans d'étage dynamiques pour identifier rapidement l'emplacement d'une alarme
- Haute disponibilité des bases de données grâce à la technologie mirroring
- Connexion sécurisée via la plateforme UltraSync entre le logiciel de gestion ATS8600 et les centrales d'intrusion Advisor Advanced et Axon.

credential.

Fire:
The Advisor management system supports full integration of the FP1200/FP2000 fire alarm panels for event monitoring as well as control over the fire alarm system installation.
It provides the operator with an intuitive graphical user interface featuring graphical plans with events dynamically displayed on screen to assist in the rapid location of a fire. This allows for improved response time to fire events and other hazards thus reducing risks to life, property or the environment.
In case of a fire alarm, the location of the alarm will instantly appear on the screen. Activation of a live video stream allows verification of the presence of a fire and if needed, other video streams can be selected directly from the floor plan. When a raging fire has been confirmed, doors can be unlocked, sounders can be activated, elevators can be brought to the ground level, all while verifying the chain of events with the video system connected.
The security manager is in control and able to handle every event. Whenever an alarm is generated, it can immediately be supported by video, that can be retrieved easily at any time. One database for all functions linked to events, where access rights can be altered, is eliminating all chances for error.

ATS8656

Licence de mise à niveau du logiciel Advisor Management pour augmenter le nombre de centrales Everon connectées - un pilote par centrale ATSx700 supplémentaire.

Spécifications techniques

General

Software type	Software gestionale

Software details

Software architecture	Kunde, Server
License type	Driver dispositivo
3rd party integration	Yes

System requirements

Supported operating system	Windows 10, Windows 7, Windows 8
Database support	SQL

Axon driver

Licensed panel increase	Increase +1
